

Fund Objective

The Satrix Low Equity Balanced Index Fund is Regulation 28 compliant and offers diversified exposure to all the key local and international asset classes. The Fund tracks a composite index benchmark, with a long term strategic asset allocation, rebalanced on a bi-annual basis in March and September.

Fund Strategy

The composite benchmark of the fund comprises the following asset class building blocks:

Asset class Index exposures

SA equity (25%)	FTSE/JSE Shareholder Weighted Index
SA bonds (20%)	JSE All Bond Index
SA property (5%)	FTSE/JSE SA Listed Property Index
SA inflation-linked bonds (10%)	Barclays SA Inflation-Linked Bond Index
SA cash (20%)	SA Nominal Cash
International equities (10%)	MSCI World Equity Index
International bonds (5%)	Barclays Global Treasury Index
International cash (5%)	International Cash Index (Notional)

Why choose this fund?

- *Investment in a stable, low equity multi-asset class fund.
- *Exposure to multiple asset classes in South Africa and abroad.
- *The benefit of significant local and global diversification.
- *Access to a fund that aims to steadily grow capital, whilst providing income over the medium to longer term

Fund Information

Fees (Incl. VAT)

	Retail Class (%)
Advice initial fee (max.)	N/A
Manager initial fee	N/A
Advice annual fee (max.)	1.14
Manager annual fee	0.40
Total Expense Ratio (TER)	0.67
Transaction Cost (TC)	0.11

Advice fee | Any advice fee is negotiable between the client and their financial advisor. An annual advice fee negotiated is paid via a repurchase of units from the investor.

The portfolio manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. This fund is also available via certain LISPS (Linked Investment Service Providers), which levy their own fees. Where this fund invests into other unit trusts, it does so into zero fee classes except for offshore equity (0.30%) and offshore bonds (0.15%).

Total Expense Ratio (TER) | The Total Expense Ratio (TER) is the charges incurred by the

portfolio, for the payment of services rendered in the administration of the CIS. The TER is expressed as a percentage of the daily NAV of the CIS and calculated over a period of 1 year. The TER is calculated from 01 April 2017 to 31 March 2018. A higher TER does not imply a poor return nor does a low TER imply a good return.

The Transaction Cost (TC) is the cost incurred by the portfolio in the buying and selling of underlying assets. This is expressed as a percentage of the daily NAV of the CIS and calculated over a period of 1 year. Obtain the costs of an investment prior to investing by using the EAC calculator provided at www.satrix.co.za

Portfolio Manager(s) Quarterly Comment - 30 Jun 2018

Macro review

In the US, consumer confidence remained strong and retail sales data suggested a rebound in consumption from a softer Q1. The unemployment rate also reached an 18-year low of 3.8%, accompanied by robust wage growth. As expected, the Federal Reserve (Fed) raised the target for the federal funds rate by 0.25% and marginally increased its 2018 forecasts for growth and inflation. The positive economic data were, however, balanced by moves from the Trump administration to impose tariffs on Chinese imports and withdraw from the Iran nuclear accord.

In the Eurozone, the quarter was marked by the return of political risk. There were concerns that Italy could need fresh elections following the inconclusive outcome of the March vote, while Spain also saw a change of government, although this was largely greeted with calm by markets. German Chancellor Angela Merkel clashed with sister party the CSU over immigration policy. Economic data pointed to steady growth but at a slower pace than last year, as GDP growth for Q1 was 0.4%, down from 0.7% in Q4 2017. However, the flash Eurozone composite purchasing managers' index for June came in at 54.8, an improvement on the 18-month low of 54.1 seen in May. The European Central Bank (ECB) announced that it expects to end its quantitative easing programme in December 2018.

Emerging markets (EM) saw an escalation in global trade tensions which also contributed to risk aversion as US-China trade talks failed to deliver a sustainable agreement. Brazil experienced a truck driver strike which paralysed the economy and amplified political uncertainty. Turkey saw currency weakness which forced the central bank to implement an emergency rate hike in May. China observed concerns over growth which contributed to Yuan weakness. Signs of slowing momentum in the domestic economy were exacerbated by deterioration in the outlook for global trade.

Global and local market review

Global developed market equities made gains in a volatile Q2, as resilient economic and earnings data vied with an unsettling geopolitical backdrop to establish the market's direction. The MSCI World Index posted a positive Dollar total return of 1.9% (-1.2% for Q1), outperforming the MSCI EM Index (-7.9% in Q2 vs +1.5% in Q1). In the US, equities advanced in Q2 with the S&P 500 gaining 3.4% in Dollars, with positive earnings momentum and supportive economic data ultimately outshining escalating US-China trade posturing. Eurozone equities also posted positive returns in Q2. In EMs, equities recorded a sharp fall with US Dollar strength a significant headwind. Worst performing countries were Brazil (-26.4%), Turkey (-25.7%) and Hungary (-14.4%), while the only countries to post positive returns were Colombia (+6.8%) and Qatar (+3.5%).

The SA equity market started June on a strong note, reaching a month-to-date total return of 4.2% by 14 June before reversing this to post a loss of 1.5% by 26 June. The FTSE/JSE All Share Index recovered on the last day of trade to record a June total return of 2.8%. Large caps returned 3.8%, while mid-caps and small caps lost 2.1% and 3.3% respectively. On a sector level, SA Resources was the best performer returning a solid 19.6% (Q1: -3.8%). SA Industrials returned 4% (Q1: -8%)

while SA Financials lost 6% (Q1: -3.6%).

Global bond markets suffered from bouts of volatility in Q2 due to a confluence of factors. These included a greater dispersion between accelerating US growth and a softening of economic activity elsewhere, escalating trade tensions between the US and China and the formation of a populist coalition government in Italy. US 10-year Treasury yields rose from 2.74% to 2.86%. They rose significantly in April, touching a seven-year high in mid-May, as growth and inflation expectations continued to build, before risk aversion and 'safe haven' buying led to a significant retracement. Bund 10-year yields fell from 0.50% to 0.30% on safe haven demand and as European data saw further softening.

The Bloomberg Commodities Index posted a slightly positive return in Q2. Crude oil prices continued to rally, with President Trump's decision to withdraw the US from the Iran nuclear accord contributing to higher prices, despite OPEC announcing plans to boost supply. The industrial metals index registered a small gain. Nickel (+11.9%) and aluminium (+8.4%) were firmly up while zinc (-11.5%) and iron ore (-1.7%) lost value. Gold and silver fell 5.4% and 1.6% respectively.

In Closing

There are growing concerns that global businesses may be subject to new regulation and be the target of tariffs if a US-China trade war escalates. Political risk is dominating fundamentals and we now have progressed into a new era where central banks are not the backstop supporting financial markets.

In South Africa, the sentiment pendulum has swung from pessimism to optimism with the new political administration driving business and consumer confidence higher with expectations of a solid economic recovery being discounted. Either way, economic mood swings tend to be exaggerated. Also, the expectation that President Ramaphosa will, in one fell swoop, reverse years of maladministration and corruption is unrealistic.

Portfolio Manager(s)

The Satrix Investment Team

Management of Investments

The management of investments are outsourced to Sanlam Investment Management (Pty) Ltd, FSP 579, an authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002.

Risk Profile (Cautious)

This portfolio aims to protect capital in real (after inflation) terms, while providing a reasonable level of income. The portfolio displays low volatility levels, designed to reduce the probability of capital losses. This portfolio has limited exposure to equities. It is designed for maximum capital protection and aims to ensure a stable income and/or income growth.

Additional Information

Although all reasonable steps have been taken to ensure the information on this website/advertisement/brochure is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision.

*The highest and lowest annualised performance numbers are based on 10 non-overlapping one year periods or the number of non-overlapping one year periods from inception where performance history does not yet exist for 10 years.

The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available from the Manager, Satrix Managers (RF) (Pty) Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in other unit trust portfolios which levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The fund may from time to time invest in foreign instruments which could be accompanied by additional risks as well as potential limitations on the availability of market information. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. The portfolio management of all the portfolios is outsourced to financial services providers authorized in terms of the Financial Advisory and Intermediary Services Act, 2002. Standard Chartered Bank is the appointed trustee of the Satrix Managers Scheme.

Glossary of Terms

Collective investment scheme (CIS)

A collective investment scheme (or unit trust) comprises a pool of assets such as equities, bonds, cash and listed property, which are managed by an investment manager and is governed by the Collective Investment Schemes Control Act no 45 of 2002. Each investor has a proportional stake in the CIS portfolio based on how much money he or she contributed. The word "unit" refers to the portion or part of the CIS portfolio that is owned by the investor. The "trust" is the financial instrument that is created in order to manage the investment. The trust enables financial experts to invest the money on behalf of the CIS investor.

Linked Investment Service Provider (LISP)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust based investments. Any investment made through these products gives an investor a single point of entry into a selection of different investments.

Composite benchmark

Multi-asset class funds offer exposure to various asset classes including cash, equity, bonds and property both locally and internationally. In a passively managed multi-asset class fund each underlying asset class is managed to deliver the return of its respective index. For example, in the SATRIX Low Equity Balanced Index Fund the property exposure is managed to deliver the performance of the FTSE/JSE SA Listed Property Index (J253). The composite index simply combines the underlying indices, each adhering to a specified weight.

Index

An index is a unique grouping of shares, selected according to a pre-defined methodology e.g. largest market capitalisation or highest dividend yield. An index can be constructed to represent the overall market, a specific sector or a theme. The index performance can be used as a benchmark against which to compare active fund performances. A well-constructed index should be transparent, replicable and investable.

Long term strategic asset allocation

The long term strategic asset allocation is the exact weighting for each asset class within the composite benchmark. The composite is rebalanced back to the strategic asset allocation biannually (March and September).

Rand-hedge protection

A Rand-hedge is a way of maximising returns on your investment in rand terms, through an offshore investment. The rand value of your investment increases if the currency declines (when the rand depreciates, the rand value of your offshore investment appreciates).

Total Expense Ratio (TER)

This is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

Volatility

Volatility is a measure of 'risk', and refers to the extent to which the price of an investment or fund fluctuates over a certain period of time. Funds with a high volatility usually offer the potential for higher returns over the longer term than low volatility funds but also the potential for significant downside.

Tax Free Unit Trust

This Fund qualifies as a tax free investment according to section 12T of the Income Tax Act, with effect from 1 March 2015. South African individuals qualify for the associated tax benefits namely no tax on dividends, income or capital gains whilst still enjoying all the benefits of a unit trust. Note contributions to tax free investments are limited to R33 000 per tax year, with a lifetime limit of R500 000. Amounts invested in excess of these permissible thresholds are taxable.
